DESCRIPTION OF PROPOSED WORKS

At the two points of diversion asked I intend to install bedrock concrete or masonry dams to gather the water and carry it to small storage reservoir in places shown in ditch flume or pipe as ground shall require. This will allow me to conserve water for piping or hydraulic work for some part of the working time. If sufficient water can be developed for a giant it will be necessary to lead the water to proper place in ditch or flume and drop it to the work in pressure pipe. The dams will be low and below the ground surface that are placed on bed rock as their sole purpose will be divert into pipes flumes or ditches and thence to temporary storage.

Reservoirs in SE $\frac{1}{4}$ NW $\frac{1}{4}$ Sec. 9 and SE $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 10.

5. Estimated cost of works \$1800

6. Estimated time required to construct works 1 year

7. Remarks There is no regular surface flow except in rain or snow freshet.
